*Are They
Smart for You?*

What is a "Smart" Meter?

It is a new, wireless replacement for the old analog electric, gas and water meters on homes and businesses. Unlike an analog (electro-mechanical) meter, a "smart" meter is a surveillance device that monitors your "energy consumption behavior." It emits biologically destructive "pulsed" microwave radiation every few seconds into your home and neighborhood and may cause cancer, damage your DNA, harm wildlife, catch fire, and disable computers and appliances. People all across the USA and the world are concerned over these health, privacy and safety issues.
