

# Greywater Rainwater Earthworks

*Tour at the Berkeley EcoHouse*

---

**Saturday, July 30th, 2011  
10am - 1pm**

Turn your house and yard into a water saving site with greywater systems, rainwater catchment, earthworks, and appropriate landscaping choices. You'll learn about the greywater system at the EcoHouse, the first permitted residential constructed wetland/greywater system in the State of California and the first greywater system in Berkeley to be permitted. We will discuss the principles and process of safely irrigating with shower, bathroom sink, and laundry waste water and include a presentation of greywater design and the application process. We'll cover the basics of how to collect rainwater from your house and store it in cisterns or directly in your garden. EcoHouse co-founder Babak Tondre leads the tour. Please specify when registering if ASL interpretation is requested, (at least 10 working days in advance). This workshop is not wheelchair accessible. Space is limited. Pre-registration by 5pm on Friday, July 29 ensures a spot.
