The State of Fracking In California:

A BERKELEY EARTH DAYS PANEL

**Tuesday,
April 16th, 2013
7pm – 9pm**

Though touted by the fossil fuel industry as the next best thing in energy production, hydraulic fracturing, fracking, poses tremendous risks to human health and natural life, from contaminating aquifers, to increasing greenhouse gas emissions, air pollution and even earthquakes.

Join us for a panel discussion with leaders in the thick of this energy battle.

Panelists include **Rose Braz**, Climate Campaign Director of Center for Biological Diversity, **Mark Schlosberg**, National Organizing Director for Food and Water Watch and **Andrew Grinberg**, Oil and Gas Program Coordinator for Clean Water Action.

We'll hear about what fracking means in California and beyond, and what you can do to stop it.

Location: Ecology Center, 2530 San Pablo Avenue, Berkeley, CA 94702
