

# The Climate Emergency

*The Future is in Our Hands*

*Climate scientists have warned us that we face a planetary emergency that threatens all life on the planet. Yet the world's most powerful governments and corporations insist on staying the same catastrophic course. Their only concern is to continue accumulating profit, no matter what the risks. Our only hope is to organize to overturn their entire system of destruction. The future of our planet and our species is in our hands. **Join Speak Out Now, along with a visiting activist from Austria, for a discussion about how we can begin to confront this emergency.***

**Saturday, July 13 (3pm to 5pm)**

**Berkeley Public Library – South Branch**

**1901 Russell St. (Near Ashby BART)**
